

BODY SOCKS

SENSORY

The body sock helps promote body awareness and creative movement while developing balance and coordination skills. Each pillowcase-like sack is constructed of four-way lycra with a loop-closed entrance and velcro fasteners. Because the material is see-through, kids can see the shapes they create and once inside find themselves in a private domain that begs for kinesthetic exploration. The body sock is ideal for individuals with Autism and Sensory Processing Disorder who crave the "hug" like feeling provided by the body sock.
